

OUTDOOR, BATHROOM AND KITCHEN CEMENT KIT - INSTRUCTIONS FOR USE

Suitable for floors laid with glue on dry, flat and compact screed.

YIELD: 10 mq

PART A - PRE-TREATMENT

HOW TO PRE-TREAT CEMENT

The pre-treatment must be applied after the laying of the tiles, on the clean floor and at the end of the drying of the adhesive used (check the technical data sheet of the adhesive).

DILUTION: Ready to use.

OUT OF POWDER: 1 hour.

WALKABILITY: 2 hours.

TOTAL DRYING: 48 hours.

TOOL CLEANING: Wash with water.

1. Shake before use; pour contents of pre-treatment bottle **A pre-treatment** into a nebulizer
2. Always test the product on a loose tile before applying it to the entire surface to check the degree of absorption of the tiles.
3. Spray evenly over the concrete floor/covering until the surface is saturated. Do not apply too much product. Excessive use may leave stains on the surface.
4. Wait two hours for the product to dry.
5. Wait 12/24 hours before grouting.

PART B - WASH

HOW TO WASH CEMENT

DILUTION: 1+4 (500 ml of product in 2 liters of water)

1. Start the wash cycle 24 hours after the cementitious grout (we do not recommend epoxy grout).
2. After grouting the tiles, on the dry floor, perform the washing.
3. Dilute the product **B wash** with water respecting the recommended dilutions.
4. Protect any surfaces (wooden, galvanized, copper, etc. ...) that could come into contact and therefore be attacked by the product.
5. Distribute the diluted solution on the tiles and leave to act for 5-20 minutes.
6. Clean the surface with a pad to wash the product and open the porosity.
7. Be sure to rinse well with water using a damp sponge.
8. Wipe up excess product. Pick up with vacuum bin or cotton cloths before it is reabsorbed by the material.
9. Wait 24/48 hours (at a minimum temperature of 20°C) for complete drying.

OUTDOOR, BATHROOM AND KITCHEN CEMENT KIT - INSTRUCTIONS FOR USE

Suitable for floors laid with glue on dry, flat and compact screed.

YIELD: 10 mq

PART C - TREATMENT

HOW TO TREAT CEMENT

DILUTION: Ready to use.

OUT OF POWDER: 1 hour.

WALKABILITY: 2 hours.

TOTAL DRYING: 48 hours.

TOOL CLEANING: Wash with water.

1. After 24/48 hours, after washing the tiles and on a clean and dry floor, carry out the treatment.
2. Shake before use. Pour the contents of the bottle **C treatment** in a container.
3. Always test the product on a loose tile before applying it on the whole surface, in order to check the degree of absorption of the tiles.
4. Spread the product with brush/brush evenly over the concrete surface until it is saturated. Do not apply too much product. Excessive use may leave stains on the surface.
5. Wait 2 hours for the product to dry completely.

PART D - FINISH

HOW TO FINISH CEMENT

DILUTION: Ready to use, but can be diluted up to 50% with distilled water.

USE: Use 500 ml for the first coat and the other 500 ml for the second.

1. 2 hours after tile treatment, on clean and dry floor, do the finishing.
2. Shake before use; pour contents of **D finish** bottle into container.
3. Always test the product on a loose tile before applying it to the entire surface to check the degree of tile absorption.
4. Spread the product evenly over the concrete surface with a brush/brush until it is saturated.
5. Spread the product evenly over the concrete surface until it is saturated; do not apply too much product. Excessive use may leave stains on the surface.
6. Apply second coat 2 hours after first coat;
7. Wait 2 hours for the product to dry completely.

RECOMMENDED MAINTENANCE

Ordinary cleaning (everyday)

We suggest to use the product **FANGOROSA SOAP - Universal detergent for all surfaces.**

Alternatively we suggest neutral soap and water. Do not use alcohol, acid-based detergents, solvents or ammonia. Do not use aggressive, acid or alkaline detergents.

Extraordinary cleaning

We suggest to use the product **Nutrient for external surfaces.**
